

## POLYCARBONATE SKYLIGHT PANELS

A polycarbonate panel is used to allow natural light in when installing metal roofing and/or siding. Polycarbonate is 20 times stronger than fiberglass and comes 100% UV protected.

Additional features include:

- Withstands extreme temperatures (-40F to 270F)
- Retains optical clarity - will not yellow like fiberglass.
- Ten year limited warranty.
- Hail and wind resistant.
- Matches the most popular metal roofing - 9" and 12" profiles.
- Best snow load capacity.

Call Alpine Distribution for up to date pricing. We will be happy to help you.

| Panel Length (ft) | Panel Width (in) | On Center Profile | Color |
|-------------------|------------------|-------------------|-------|
| 10                | 38               | 9"                | Clear |
| 12                | 38               | 9"                | Clear |
| 20                | 38               | 9"                | Clear |
| 10                | 38               | 9"                | White |
| 12                | 38               | 9"                | White |
| 20                | 38               | 9"                | White |
| 10                | 38               | 12"               | Clear |
| 12                | 38               | 12"               | Clear |
| 20                | 38               | 12"               | Clear |
| 10                | 38               | 12"               | White |
| 12                | 38               | 12"               | White |
| 20                | 38               | 12"               | White |
